IMAGERY & DATA DISCLAIMER

The imagery and data presented on this page are obtained from multiple verified sources. Availability may vary depending on regional database coverage. These visuals are intended to provide up-to-date aerial information; however, recent structural changes or variations in image quality may not yet be reflected in the ortho-imagery displayed. Vegetation, seasonal conditions, and shadows may affect roof visibility. Roof measurements are generated using dedicated measurement tools and do not rely on the imagery shown. The photos are provided solely for visual reference.

4 DOWNSPOUT QUANTITY

Downspout quantities are estimated at intervals of approximately 25–35 linear feet of guttering, depending on local rainfall intensity and drainage requirements. Additional downspouts may be recommended for shorter gutter runs to improve overall drainage performance.

DOWNSPOUT HEIGHTS & LOCATIONS

Downspout heights are approximate and may vary depending on the drainage configuration and the location of each downspout, including discharge to a splash block, connection to an underground pipe, or direct surface release.

- ○ **Downspout — Main Level (Lower Elevation)**
- ● **Downspout — Upper Level (Higher Elevation)**
